

## # Hosted Payment Pages (HPP) API

Our low-code integration to take payments securely.

### \_\_Authentication header\_\_

```
Authorization: {your_credentials}
```

Replace `{your\_credentials}` with your base64-encoded Basic Auth username and password given to you by your Implementation Manager.

<br /> <br />

You **must** use the `Authorization` header for any request you send to our Hosted Payment Pages APIs.

### \_\_Accept header\_\_

```
Accept: application/vnd.worldpay.payment_pages-v1.hal+json
```

We use the Accept header to identify which version of our API you are using. You must use the Accept header for any request you send to our Hosted Payment Pages APIs.

<br /><br />

### \_\_DNS whitelisting\_\_

Whitelist the following URLs:

```
* `https://try.access.worldpay.com/`
```

```
* `https://access.worldpay.com/`
```

Please ensure you use DNS whitelisting, not explicit IP whitelisting.

Version: 1

Metadata:

- category: ["3DS", "Card Payments", "Risk Assessments", "Tokens", "Wallets", "Query Payments"]
- business: ["SMB (Worldpay eCommerce)"]
- catalog-list: true
